

Options to Affix Security Labels to Heavily Textured Surfaces*

Option #1: Install Affixing Pads on the Textured Surface*

- The Affixing Pad has a thick adhesive (designed for a textured surface) and a smooth surface (designed for the standard security label)
- The Affixing Pads are 'permanently' installed on the textured surface at the intended location where standard security labels will be positioned.
- The adhesive of the Affixing Pad is high strength and difficult to remove, which helps to insure the affixing pad will not be mistakenly removed.
- If removed, the Affixing Pad is tamper evident (shows the word VOID) and will leave an adhesive residue on the surface.

Option #2: Use Premium Security Labels (S39B)

- The S39B labels have a thicker adhesive, which will perform better on heavily textured surfaces*. These labels can be directly applied to the heavily textured surface.
- The S39B labels are 10% more expensive compared to our standard security labels.

* The Wayne Ovation Access Door is heavily textured.
