What's New?

6600-M-LTE

Upgrade your legacy hardware to the latest high-performance 6600-M-LTE and get additional cellular failover functionality and the fastest router/firewall available from Mako.

No additional monthly charges to upgrade for the hardware replacement. Call Mako today to discuss your options!

Speed Test

Mako's new broadband speed test allows you to identify poor broadband conditions. Testing can begin and end during overnight hours when your stores have less traffic. Plus, you can schedule testing for individual sites or in groups for poorest-performing sites.

Health Monitors

Get real-time health alerts for every device connected to your network. Monitor "heartbeats" from EPS, PoS, fuel control, PIN pads, DVR, ATGs and other devices.

Merchant PCI:
Coming Soon!

The new Mako PCI Dashboard provides single-site and enterprise-wide views of your retail locations' PCI compliance status in real-time on a color-coded map. See at a glance which locations have run network vulnerability scans or filed an SAQ, as well as filing dates and other details. Never wonder again whether all your stores have addressed their PCI obligations. An additional monthly fee will apply.

Project "Periscope":
Coming Soon!

The Mako CMS can now access third-party devices using their native web service applications, eliminating the need to integrate through a back-office device to access the service.

For example, you can use our web-based proxy instead of your back-office PC to troubleshoot your PoS device.

Site Network Map

In preparation for PCI DSS 4.0 reporting requirements, the Mako CMS will now illustrate a network map of every device connected to the site, including PoS, controllers, DVRs, tank monitors and back-office applications.

Mako Voice

Mako Voice can be tailored to meet your franchise's requirements, including options for Hosted PBX or SIP Trunking, allowing you to save money on your phone service while using existing equipment. Mako Networks consults with you to determine the best services for your needs. One license provides every advanced feature, whether the platform is on-premises or hosted. An additional monthly fee will apply.

LEARN MORE

GET ACCESS TO THESE NEW FEATURES BY UPGRADING TO THE 6600.
Site Installation fees will apply.
